

Brainware by Hyland: Capture

Brainware by Hyland incorporates a complete set of document and content capture tools, focused on automation and enhancing the speed of capture.

Brainware Intelligent Capture provides classification and extraction capabilities through document learning with minimal configuration. Three pre-configured solutions are available that include engines already trained in capture for particular document types. **Brainware for Invoices** is the preferred capture tool for Invoice capture when line item detail is required and data validation is needed from AP systems. **Brainware for Transcripts** and **Brainware for Remittance** provide automated capture for those documents.

Advanced Capture provides template-based classification and extraction for structured and semi-structured documents of any type. **Intelligent Capture for AP** provides simpler invoice capture with header-type information, when line-item detail is not required. **OCR for AnyDoc** is available for automated capture within existing AnyDoc solutions and for specific healthcare forms capture.
